Dear Sir,

SECOND GENERATION POOL BLANKETS

It is a statutory requirement to provide a pool blanket to reduce evaporation loss. This requirement is for only 40% of the wetted area exposed but the market preferred a full cover where the shape was amenable to protect from leaves and to decrease pool operating costs, for only a marginal increase in blanket installed price.

This coupled with wind effects, has lead to entrapment of chlorine at the edges. This has resulted in serious chlorine bleach of the gelcoat finish in GRP moulded shells.

I have read the technical reports from ChemCentreWA and Zedcon Scientific Services and am convinced that this innovation will remedy a problem that has appeared intractable.

Yours faithfully,

J B BERRY FIEAust CPEng
